

# **DISCRETE SEMI CONDUCTORS AND OPTO-ELECTRONICS (VOLUME TWO)**

## **PREFACE**

## **PART ONE - DISCRETE SEMICONDUCTORS**

### **INTRODUCTION TO SEMICONDUCTORS**

#### **CHAPTER ONE - DEFINITIONS AND GENERAL INFORMATION**

The family of discrete semiconductors

Materials used to produce semiconductors The semiconductor mechanism

The electronic switch

Summary

Reinforcement exercise

#### **CHAPTER TWO - DIODE MANUFACTURE**

Silicon rod production

Wafer production

Wafer scribing, separation and completion

Reinforcement exercise

#### **CHAPTER THREE - DIODE CHARACTERISTICS AND SPECIFICATIONS**

Diode action

Characteristics

Specifications

Zener diodes

Zener diode specification

Part number designations

Reinforcement exercise

#### **CHAPTER FOUR - DIODE APPLICATIONS**

General purpose switch

Computer switch

Photo diode

Varactor

Half-wave Rectification

Full-wave Rectification with two diodes

Full-wave Rectification with bridge rectifier

Voltage regulation

Voltage reference

Circuit protection

Conceptual design of a regulated D.C. power supply

Reinforcement exercise

#### **CHAPTER FIVE - THYRISTORS (AC SWITCHES)**

Thyristor and silicon controlled rectifier (SCR) definitions

SCR mechanism with DC supply voltage

SCR mechanism with AC supply voltage

SCR specifications

SCR applications - Lighting and heat control

DC power supply monitor

Transient voltage protection

Improving thyristor efficiency

TRIACs - specifications, mechanism, and characteristics

DIAC mechanism and specifications

Heat transfer considerations

Reinforcement exercise

## CHAPTER SIX - BIPOLAR TRANSISTORS

Definitions and designations  
Transistor mechanism as a linear amplifier  
Transistor mechanism as a digital switch  
Bipolar transistor specifications  
Bipolar transistor applications  
Bipolar transistor characteristics and trade-offs  
Glossary of subscript notations  
Reinforcement exercise

## CHAPTER SEVEN - FIELD EFFECT TRANSISTORS (FET)

History  
Categories, definitions and designations  
Advantages of FETs compared to bipolar transistors  
Junction FET construction  
Junction FET mechanism  
Junction FET operation as an amplifier  
Junction FET operation as a digital switch  
MOSFET - Types and definitions  
Enhancement type - Construction and mechanism  
Depletion type - Construction and mechanism  
Junction FET specifications  
MOSFET specifications  
CMOSFET technology  
Field effect transistor applications .  
Reinforcement exercise

## CHAPTER EIGHT - TRENDS FOR DISCRETE SEMICONDUCTORS

Power MOSFETs  
Insulated gate bipolar transistor (IGBT)  
Power transistor packaging  
Surface Mounted Device (SMD) Technology

## CHAPTER NINE - SEMICONDUCTOR RELIABILITY

Introduction  
Military specification MIL-S-19500 - reliability levels  
Military standard MIL-S-750  
The elements of military specification MIL-S- 19500  
Quality control program  
Causes of semiconductor failure  
General comments on high-reliability semiconductor

## ANSWERS TO REINFORCEMENT EXERCISES

Chapter One - Definitions and General Information  
Chapter Two - Diode Manufacture  
Chapter Three - Diode Characteristics and Specifications  
Chapter Four - Diode Applications  
Chapter Five - Thyristors  
Chapter Six - Bipolar Transistors  
Chapter Seven - Field-effect Transistors

## GLOSSARIES

Common acronyms and miscellaneous designations  
Electronic terms  
Electronic symbols

## **PART TWO - OPTOELECTRONICS**

### INTRODUCTION TO OPTOELECTRONICS

#### CHAPTER TEN - LIGHT EMITTING DIODES (LED)

LED construction  
LED packages  
Principle of operation  
Specifications  
LED characteristics  
LED applications  
Reinforcement exercise

#### CHAPTER ELEVEN - LED DISPLAYS

Definitions  
Segmented digital display  
The overflow digit  
Segmented bar graph display  
Dot-matrix digital display  
Display modes  
Display driving techniques - direct DC drive  
Strobed or multiplexed drive  
Onboard integrated circuits  
Display selection criteria and specifications  
Reinforcement exercise

#### CHAPTER TWELVE - OTHER DISPLAY TECHNOLOGIES

Gas discharge display and construction  
- Principle of operation  
- Characteristics  
- Specifications  
Vacuum fluorescent displays - principle of operation  
Cathode ray tube - construction and operation  
Indicator panel display construction and operation  
- Specifications  
Liquid crystal display (LCD) and characteristics  
- LCD construction and operation  
- Nematic field effect type  
- Dynamic scattering type  
- Interfacing circuitry considerations  
- LCD specifications  
- Reinforcement exercise

#### CHAPTER THIRTEEN - OPTO-COUPLEDERS (OPTO-ISOLATORS)

Functions of an opto-coupler  
Spectral response of silicon  
Construction and principle of operation  
Slotted opto-coupler applications

#### CHAPTER FOURTEEN - SOLID-STATE RELAYS (SSR)

Principle of operation  
Comparisons with electromechanical relays  
Specifications  
Reinforcement exercise

## CHAPTER FIFTEEN - OPTO TECHNOLOGY UPDATE

Large flat-panel displays

Liquid Crystal Display (LCD) technology

Active Matrix Full Color Flat Panel Display

Electroluminescent (EL) display technology

Fiber optics

- Principle of fiber optics

- Step-index fiber

- Graded-index fiber

- Mono-mode fiber

Fiber optic cable characteristics

Fiber optic advantages summary

## ANSWERS TO REINFORCEMENT EXERCISES

Chapter Ten - Light Emitting Diodes (LEDs)

Chapter Eleven - LED Displays

Chapter Twelve - Other Display Technologies

Chapter Thirteen - Opto couplers (Opto-isolators)

Chapter Fourteen - Solid-state Relays (SSR)

## GLOSSARIES

Optoelectronic terms

Optoelectronic symbols
