

TABLE OF CONTENTS

1. Introduction	1
1.1 The World's Fastest Elevator	7
1.2 Why Combine New Materials and New Technologies	8
1.3 References	11
2. Smart, Lightweight Aramid Ropes	15
2.1 Introduction	15
2.2 Manufacturing of Aramid Fibers	18
2.3 Properties of Aramid Fibers	20
2.4 The Parafil Ropes	22
2.5 Application of Aramid Fibers to Elevator Ropes	24
2.6 References	27
3. Fiberglass Sandwich Panels for Aerodynamic Noise Reduction	31
3.1 Aerodynamic Noise Reduction Techniques	31
3.2 Fiberglass	35
3.2.1 Properties of Fiberglass	37
3.2.2 Manufacturing of Fiberglass	38
3.2.3 Presentations	39
3.3 Composite Fiberglass Matrices	40
3.3.1 Polybutylene Terephthalate	41
3.3.2 Polycarbonate	43
3.4 Other Applications of Fiberglass to Vertical Transportation	47
3.5 References	50
4. Ultra-Strength, Lightweight Freight Hydraulic Elevators of Carbon Fiber Composite Grids	57
4.1 Introduction	57
4.2 Classification of Carbon Fibers and Types by Manufacturing Process	59
4.3 Properties of Carbon Fibers	65
4.4 Industrial Presentations of Carbon Fibers	66
4.5 Epoxy Resins	68
4.6 Applications for High Load Bearing Platforms for Freight Hydraulic Elevators	69
4.7 References	75
5. Nanomaterials: The Key for the Space Elevator	81
5.1 Introduction	81
5.2 Thermoplastic Nanocomposites	82

5.3 Carbon Nanotubes	82
5.3.1 Discovery	84
5.3.2 Single-Layer Nanotubes and Nanotube "Ropes"	84
5.3.3 Production Methods	86
5.3.4 Properties of Carbon Nanotubes	88
5.3.5 Application to the Space Elevator	89
5.4 References	93
6. Polyamide Sheaves and Polyurethane-Coated Traction Belts	101
6.1 Introduction	101
6.2 Plastics Injection Molding	103
6.2.1 Other Molding Processes	105
6.3 Polyamides	105
6.3.1 Properties of Polyamides	106
6.3.2 Applications of Polyamides to Elevators	109
6.3.2.1 Sheaves	109
6.3.2.2 Other Applications	113
6.4 Polyurethanes	113
6.4.1 Properties of Polyurethanes	114
6.4.2 Applications	116
6.4.2.1 Traction Belts	116
6.4.2.2 Buffers	117
6.4.2.3 Other Applications	117
6.5 References	118
7. Self-Propulsion: Gear, Adhesion and Lightweight	123
7.1 Introduction	123
7.2 Harmonic Drive Reduction Gears	124
7.3 Polyurethane Wheels	126
7.4 Aluminum, the Lightweight Material for Elevator Cars and Guides	131
7.4.1 Manufacturing of Aluminum	131
7.4.2 Properties of Aluminum	132
7.5 The SchindlerMobile	138
7.5.1 Automatic Evacuation	139
7.5.2 Destination Call Control	139
7.5.3 Production Methods	140
7.5.4 How the Automatic Passenger Evacuation System Functions	140
7.5.5 The Aluminum Car	141
7.6 References	143

8. Permanent Magnet Synchronous Motors and Linear Induction Machines	147
8.1 Introduction	147
8.2 Permanent Magnet Synchronous Motors	149
8.2.1 Compact Disk Drive Approach.	149
8.2.1.1 The Alta System	156
8.2.2 The Miniaturization of the Traction Machine by Using PM Motors	159
8.3 Linear Induction Motors	160
8.3.1 Linear Induction Motors Applied to Door Systems.	163
8.4 References	165
9. Intelligent Traffic Management	169
9.1 Introduction	169
9.1.1 Vertical Traffic	175
9.2 Artificial Neural Networks	176
9.2.1 Biological Neurons.	176
9.2.2 Artificial Neurons.	178
9.2.3 Neural Network Elements	180
9.2.4 Backpropagation Model.	183
9.2.4.1 Description.	183
9.2.4.2 Learning of Multi-Layer Perceptron	185
9.2.4.3 Applications	189
9.3 Applications of Artificial Neural Networks to Vertical Traffic	190
9.3.1 Identification of Vertical Traffic Patterns with ANN	190
9.3.2 Neural Network for Elevator Control	192
9.4 Fuzzy Logic	194
9.4.1 Introduction	194
9.4.2 Fuzzy Set Theory.	195
9.4.3 Fuzzy Controllers.	198
9.4.4 Applications	202
9.5 Applications of Fuzzy Logic to Vertical Traffic.	202
9.5.1 Fuzzy Control System of a Group of Elevators	202
9.5.2 Elevator System Controller Based on Fuzzy Response Time Logic	205
9.6 Genetic Algorithms.	208
9.6.1 Introduction	208
9.6.2 Coding.	209
9.6.3 Fitness Function	210
9.6.4 Reproduction	210
9.6.5 Convergence	212
9.6.6 Applications.	213

9.7 Applications of Genetic Algorithms to Vertical Traffic	213
9.7.1 Control Parameter Optimization of a Group of Elevators	213
9.8 References	215
10. Fiber Optic Sensors and Cables for Monitoring, Communications and Lighting	221
10.1 Introduction to Fiber Optic	221
10.1.1 History of Fiber Optics	222
10.2 Advantages and Disadvantages	223
10.3 Fiber Optic Technology	227
10.3.1 Transmission, Composition and Foundations	227
10.3.2 Classification and Properties	229
10.3.3 Types of Cables	231
10.3.4 Installation Buildings	233
10.3.5 Fiber Optic Sensors	235
10.4 Applications to Elevators	237
10.4.1 Remote Monitoring and External Communications	237
10.4.2 Photoelectric Sensing	239
10.4.3 Incorporation to Electrical Cables of the Elevator	240
10.4.4 Lighting and Cabin Decoration	241
10.4.5 Connection Between Elevator Equipment Units	242
10.4.6 Elevators with Problematic Surroundings	242
10.5 References	243
11. Infrared Beams for Door Detection	247
11.1 Introduction	247
11.2 Infrared Sensors	251
11.2.1 Wave Generation System	253
11.2.2 Systems Design	254
11.2.3 Transmission Circuits	255
11.2.4 Infrared Receiver Preamplifier	258
11.2.5 Codified Wave Detector	260
11.2.6 Expander/Out Excitator	260
11.2.7 A Power Supply	261
11.3 Infrared Technology Applications to Elevators	262
11.3.1 Passage by Floor	262
11.3.2 Weigh-Loads	263
11.3.3 Automatic Door Detector	265
11.4 Infrared Technology in Escalators	269
11.5 References	271
